

CASE STUDY

FORESTRY & HARVESTING COMPANY

Problem

Laden logging trucks exiting forest tracks onto sealed public highways.

Solution

EV Alert reduced the danger of collisions between trucks and road users. The EV Alert solution provided road users with a 500 metre warning of an approaching truck. This was achieved by installing a portable battery powered strobe light at the intersecting roads which is triggered by the transmitters on the logging trucks.

Job Completed:

Testimonial

"The contractors & drivers are happy because it is so easy to install & use. It is quite helpful in these situations where extra alertness is needed when public cars & logging trucks are in close proximity."
